

The new FL-1 putter grip combines G-Rip's innovative technology and use of high-performance materials to help golfers of all abilities get more feel into their putting game and help lower their scores.

## Microfibre Material

The key to the FL-1's enhanced performance is a lightweight EVA under-lining with a microfibre cover. The cover itself features hundreds of tiny silicone buds on the surface, which create more points of contact with the hands, for an enhanced grip. Its unique moisture-repelling properties ensure it is effective in all weather conditions.

# FL-1

The FL-1 increases feel and grip in all weather conditions with a unique silicon bud surface, and encourages a more consistent stroke with its triangular shape.

Available in five bold colour options:

## Unique Triangular Shape

Fitting neatly into the palms of the hand, the V-shape at the back of the grip helps golfers put their hands consistently into the correct position, time and time again, leading to a more repeatable stroke, more control, and more holed putts.

**G-Rip**

It's all about feel
