

The new G-Rip ST-1 offers grips that have a much straighter taper than normal putter grips. Combining this with the current trend for oversized designs, the ST-1 is a grip that sits comfortably in the hands, without losing any feel.

Lightweight Materials

Weighing a very light 52g, the G-Rip ST-1 features a polyurethane textured surface, which provides a tacky feel to enhance grip - especially in wet or damp conditions. The underlisting is made from a very lightweight EVA compound. The ST-1 grip also contains shock-dampening properties to reduce vibration through the hands at impact.

ST-1

The ST-1 combines G-Rip's innovative technology and use of high-performance materials to help golfers of all abilities get more feel into their short game and lower their scores.

Available in four two-tone colours

Oversize Design

The ST-1 grip is bigger at the bottom, making the lower hand less likely to flick or get quick at impact, encouraging a slow smooth release through the stroke.
